## Product Information

**Categories:** Shirt finisher

**Categoria:** Shirt finisher (wet)

**Riscaldamento:** Electric, Adjustable

Camptel Line  
SHIRT FINISHER

The Zephyr 30 C E shirt finisher is designed to meet every laundry need in terms of operational quality, productivity and cost-effectiveness. Suitable for drying and ironing damp shirts (25% humidity). Electrically heated with 15 kW heating element.

This shirt finisher represents the most modern version of a system that has been on the market for several years, but continues to be appreciated by laundries with a daily production capacity of 150/200 garments. The ironing of wet shirts, after finishing the collar and wrists using the Technoshirt press, is carried out through simultaneous drying and tensioning operations. The garment is ironed through contact with the finisher's cloth, which through the strong emission of hot air dries and stretches the shirt in about 90 seconds (depending on the type of fabric). Drying is guaranteed by a steam heat exchanger and a strong air ventilator. The working time and operating temperature are set by means of a timer positioned on the front of the

equipment.  
Ease of use, economy and robustness make the Zephyr the best answer to the needs of small laundries, in compliance with Campitel's quality guarantee.

## Product Description

Other power voltage available on request	
Power Voltage	V400/ph3+N+T/50hz
Air working pressure	6 Bar
Heating element	15 kW
Weight	180 kg
Overall dimensions	2000x1300x1650xH mm
